Protective Blanket

Safety Precautions

WARNING: To help prevent personal injury,

- A protective blanket should not be considered a total protection device. Other personal protective equipment (PPE), such as safety glasses (that meets ANSI Z87.1, CE EN166, AS/NZS 1337, and OSHA standards), safety shoes, and hard hats, must also be used. Stand away from the work area when applying force.

- Replace any protective blanket that is cut, torn, or damaged.
- Release the force from a workpiece before removing the protective blanket to look at or adjust the workpiece.

- The protective blanket can be used in many different applications. It is the responsibility of the user to determine the best method of protection.
- Do not store or use the protective blanket near heat in excess of 200° F (93° C).

Instructions

1. Check the protective blanket for cuts, tears, or damage; do not use the blanket if any of the conditions exist.
2. Wrap the blanket around both the workpiece and the tool. Secure the blanket in place with straps.

NOTE: Figures 1 and 2 are examples of how a blanket can be used. These photos show a clear blanket to help understand the use of blankets, however, clear blankets are not available. Our protective blankets are a solid, opaque color, and not see-through.

Figure 1 - blanket covers both the puller tool and the part being pulled.

Figure 2 - blanket covers the housing, the bearing being installed, and the installing tool.

Preventive Maintenance

CAUTION: To help prevent equipment damage,

- Do not store or use the protective blanket near heat in excess of 200° F (93° C).
- Clean blankets as needed with a damp cloth and mild detergent. Do not use harsh chemicals or solvents.
